

TZ MEDICAL FLAT RADIAL BOARD

The dimensions of the Flat Radial Board are 44.4" long and 22.9" at its widest point, offering plenty of space and positioning options.

TZ Medical Flat Radial Board

The TZ Medical Flat Radial Board is a lightweight carbon fiber board specifically shaped to allow convenient radial access in conjunction with medical imaging and patient comfort. By combining radial access and a landing zone for equipment, the Flat Radial Board takes radial access to a whole new level.

The Flat Radial Board can be used with the new Radial Runway, which helps keep the patient's wrist in position for radial access. Both the Flat Radial Board and the Radial Runway can be used for radial access on either the right or left side.

Flat Radial Board shown in use with Radial Runway Part# RRU-008 & RRU-009

Flat Radial Board
Part# CZ-400

Product Features
